

Solutions for IP Surveillance

General Surveillance

How do you ensure that you have a surveillance system that uses the most robust technology, is highly scalable, future proof and can be used across multiple sites?

The surveillance industry has a variety of options that claim to meet all your requirements; from outdated and fast becoming obsolete systems to technology upstarts with new, untested and notoriously unreliable products which are hard to use and unsupported.

With so many options to choose from Mirasys stands out as a solution that has been developed and perfected for over 15 years, defining the evolution from analogue CCTV to IP surveillance. A truly reliable software and recorder, designed to meet the most exacting functional requirements and with a service team dedicated to help you get the most out of your investment.

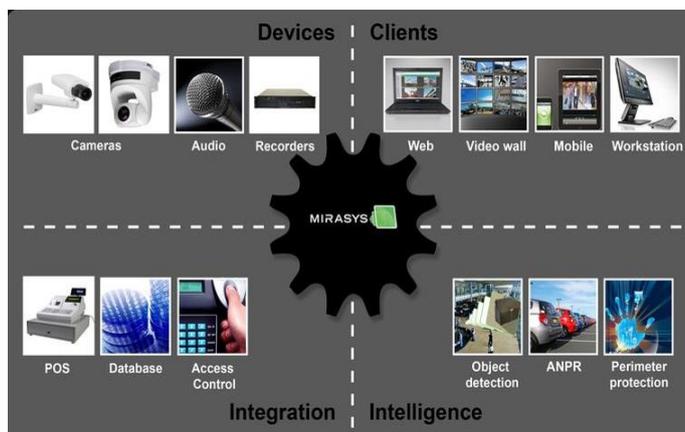

Like burglar alarms and insurance nobody really wants the expense of a surveillance system, but with a Mirasys Solution you can be assured that the money you spend is being invested wisely into the most reliable and comprehensive future proof system that can adapt to an ever changing world of intelligent cameras, crime and risk. With a true open architecture approach and integration with third party security and business products such as Fire Alarms, Intruder Alarms, Access Controls and Video Analytics.

More security for less

- Both analogue and IP cameras can be installed in one single server
- Multi servers can be managed by one workstation or standard PC. Mirasys Enterprise supports up to 100 recorders and 6,400 cameras in one centrally managed environment
- Multi-layer maps tool helps you to manage cameras and alarms with one simple click
- Free client Spotter Mobile allows you to access video and data across multiple sites, anytime, anywhere via phones, PDAs and hand-held tablets. It means that you can control your sites out of working hours or you can analyse the situation before entering the building and get a quick response to accidents and suspicious activities

Maximise your long term investment

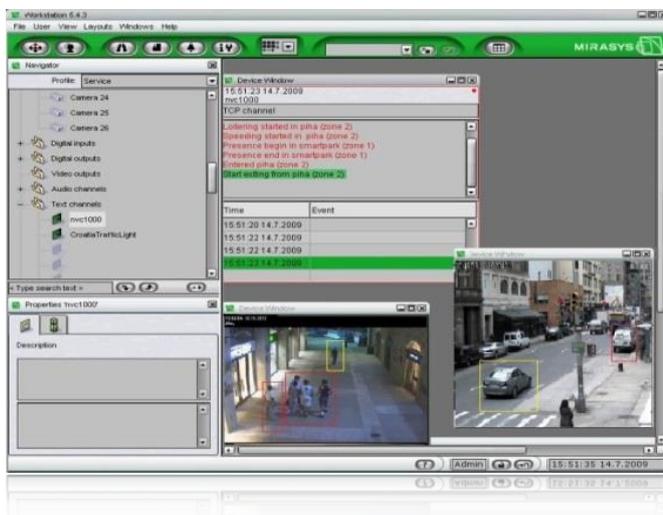

- Cost-effective, seamless transition to IP-based surveillance with practically unlimited scalability
- Easy integration with existing or new technology to upgrade your system for future security needs
- Mirasys VMS supports a wide range of security systems such as Access Control, Intruder Detection, Car Park Management, Panic Alarms, Fire Alarms, Audio Monitoring and Video Analytics

So much more than analogue; intelligent systems

- Playback and powerful search tools help to identify incidents quickly and efficiently, reducing operational costs
- Clear high quality images; you can zoom-in, or send a snapshot via email. You will not miss any details of the scene and footage can be used for forensic analysis and evidence
- Alarm events settings allows you to decide what events or activities you want to track; the system will alert you with the exact location of the triggered event for an immediate response
- Tamper detection mechanisms to prevent camera vandalism and data forging
- Mirasys System Monitor informs you of any system malfunctions and further enhances the software reliability

Boost your security system performance with built-in Video Analytics

- Dwell time, stopping and direction detects people lingering in front of fire exits or leaping barriers or gaining access to protected areas. Creates quick response times to incidents and enhances safety and security performances
- Perimeter detection alerts personnel only if an important event occurs and reduces the number of false alarms
- Counting add-on helps you to monitor buildings usage and make effective decisions in terms of staffing or utilities efficiency
- ANPR controls vehicle access in selected area, detects unauthorised vehicle movements, alerts on potential threats and reports on car park usage

About Mirasys

Leaders in IP Surveillance since 1997. Mirasys is a global organisation, headquartered in Finland. Offering dedicated UK knowledge, customer service and support. Over 40,000 customers are using Mirasys systems with nearly one million cameras connected. Mirasys supports over 1,500 camera models from all leading manufacturers.
